

Enabling internet access on a VM/Server/PC through command line.

Download the script for the following URL:

1. # wget <https://csc.iitd.ac.in/uploads/proxy.sh>
2. Edit proxy.sh

Change **proxy_add**=<https://proxy82.iitd.ac.in/cgi-bin/proxy.cgi>

to the proxy URL based on your category if you are not a faculty.

3. Key in your user and password in the script.

Save settings.

4. #chmod a+x proxy.sh
5. #./proxy.sh &

It will show proxy login

Then

6. Run the following commands on the same terminal:

```
#export http_proxy="http://proxy82.iitd.ac.in:3128"  
#export https_proxy="http://proxy82.iitd.ac.in:3128"
```

(or change the proxy URL based on your category)

Now you can install any package using standard installation commands for desired Linux distribution.
